

Ever since there is a spread of pandemic will technology useful in combating pandemic. During the initial stages of the COVID-19 outbreak, due to lack of public awareness, there was spike in positive cases. At a time when the fear of COVID has heightened further, there is space for technological solutions.

We, the students of the B15 batch, came up with an initiative known as **“Tele-Mitigation service(TMS)”**.

The Tele Mitigation service is a technology-driven solution, which obtains the information from the students about their health status like flu-like symptoms and helps to endorse better precautions during this pandemic.

**The Student Welfare Office (SWO)** has partnered with team **TMS** for the smooth execution of exams and to curtail the spread of COVID-19 within the campus.

To unleash the full potential of **TMS**, the *administrative staff, teaching, and non-teaching staff, and students of E-4* are requested to help in securing medical information by filling the form provided in the notice attachment.

The object of **TMS** is to provide reliable data to arrest rampant spread of virus.

The processes involved in the functioning of TMS are:

- 1) Pooling of data**
- 2) Dissemination of Data**
- 3) Deployment of Task Force**
- 4) Updating of Data.**

Team TMS assures everyone that fills our survey that their personal information will remain undisclosed to any third party. So, we urge every person to fill it with absolute honesty and without fear.

**Pandemic is not a word to use lightly or carelessly.  
It is a word that, if misused, can cause unreasonable fear, or unjustified  
acceptance that the fight is over, leading to unnecessary  
suffering and death."**

**- Dr. Tedros**

**Take** the survey now.
