

Mars Asia Hackathon 2021

Hi Future Leader,

Filecoin along with Polygon announces the launch of Mars Asia Hackathon 2021.

Decentralized data storage is driving a fundamental shift in the efficiency and economics of large-scale storage systems. By eliminating the centralized control, decentralized data storage allows users to store and share data without relying on third-party storage providers and allows us to mitigate the risk of data failures and outages while increasing security, performance, and privacy.

In order to facilitate decentralized web adoption, Filecoin along with Polygon have collaborated to launch the **Mars Hackathon** focused on decentralizing storage!

We would like to invite all #Builders and developers to disrupt the current data storage realm by creating inventive solutions utilizing the Filecoin and IPFS frameworks.

Rewards:

- Cash prizes worth **USD 35,000**
- Beyond hackathons, together with our ecosystem partners and collaborators, we offer a broad range of follow-on opportunities (incl. access to grants, accelerators, seed funding and more) so ideas can grow into winning ventures.

This is your chance to compete with the best minds and put your best idea forward!!
