**REGISTRATION LINK:** <https://forms.gle/9Y999GJo2zNoqBna7>

#### SELECTION PROCESS:

- 1) Online Assessment
- 2) Virtual Interviews (Three Rounds - Technical, Sr. Manager & HR Round)

#### JOB DESCRIPTION:

Replicon is looking for software developers who are passionate about coding and technology to work on our Time Intelligence platform. Our SaaS application is used globally by thousands of customers and millions of users. We want to build out our team with more engineers who are also passionate about building great applications and care about giving our customers a great user experience.

#### DESIRED SKILLS:

- Good understanding of software development fundamentals / OOPS concepts
- Ability to convert the requirements to simplistic technical design
- Knowledge in any of the scripting languages
- Knowledge in C# or node.js
- Good analytical & problem-solving skills
- An openness to write code that conforms to the best practices and policies of a large software organization, not just your personal preferences

- A desire to take ownership and pride in everything you do and stand by what you deliver
- Readiness to hit the ground running – you may not know how to solve everything right off the bat, but you will put in the time and effort to understand so that you can

### **ABOUT THE COMPANY:**

Replicon is the leading provider of cloud-based time tracking applications. Our award-winning products are delivered 100% in the cloud on a single platform, and are therefore simple and hassle-free to trial, buy, deploy, and use. We are a global company with employees in the United States, Canada, India, the United Kingdom, and Australia.

### **WHAT YOU WILL LEARN:**

- Coding across the entire stack – UI, Services and Data
- Unit testing, test-driven development and test automation engineering in a real-world SaaS environment
- Infrastructure as a Service (IaaS) using Amazon Web Services (AWS)
- A technology toolbelt that includes leading edge languages and tools with knowledge on when and why to use them
- How to work as an individual contributor on a large software team
- How an SDLC (software development life cycle) works in industry and scales to large teams releasing multiple interrelated software component multiple times per day
- How to get your code into production to be used by real customers
- How to adopt industry best practices in all of your projects - TDD (test driven development), CI/CD (continuous integration and continuous delivery), IaC (Infrastructure as Code), linting, static code analysis
- Software and system architecture best practices, such as a microservice architecture and serverless computing, that allows a complex business application to scale to millions of users in a cost-effective manner

### **HOW WE WORK:**

- An agile development environment delivering software features to production every day
- Work as a Team, Have fun as a team
- A relentless desire to continuously improve
